Project Report

Topic: Google Play Analysis (using SQL and PowerBI)

Google Play

Division B

Submitted by : Yusra Sayed

PRN : 23030141082

Problem Statement

The goal is to analyse the Google Play Store Apps dataset to derive insights into the app market. We aim to understand the factors that contribute to an app's success, including its user ratings, reviews, and category. We want to explore user sentiments towards apps by analysing the user reviews dataset. Additionally, we can see insights into the popularity of app categories based on the total number of installs and the sentiment polarity of user reviews. The ultimate objective is to provide recommendations for app developers to enhance their app's performance and user satisfaction.

Overview of dataset:

- Provide the overview of dataset by how many total unique apps and categories in our dataset.

Explore App Categories and Counts:

- Retrieve the unique app categories and the count of apps in each category.

Top-rated Free Apps:

- Identify the top-rated free apps.

Most Reviewed Apps:

- Find the apps with the highest number of reviews.

Average Rating by Category:

- Calculate the average rating for each app category.

Top Categories by Number of Installs:

- Identify the app categories with the highest total number of installs.

Average Sentiment Polarity by App Category:

- Analyse the average sentiment polarity of user reviews for each app category.

Sentiment reviews by App Category

- Provide the distribution of sentiments across different app categories

About the Dataset

Source of the dataset : <https://www.kaggle.com/datasets/laval18/google-play-store-apps>

Dataset 1 – googleplaystore.csv

App	Category	Rating	Reviews	Size	Installs	Type	Price	Content Rating	Genres	Last Upd	Current Ver	Android Ver

App : name of the app

Category: category of the app based on its nature.

Rating: rating out of 5

Reviews: number of reviews received by the app

Size: download size of the app

Installs: total number of installations done by users

Type: (free or paid app)

Price: price of the app (if it is paid)

Content rating: app for audience

Genre : genre of the app

Last updated: last released update of the app

Current ver: current app version

Android ver: android version required for the app to be installed

Dataset 2 – googleplaystore_user_reviews.csv

App	Translate	Sentiment	Sentiment_Polarity	Sentiment_Subjectivity

App: name of the app

Translated review: User review (Pre-processed and translated to English)

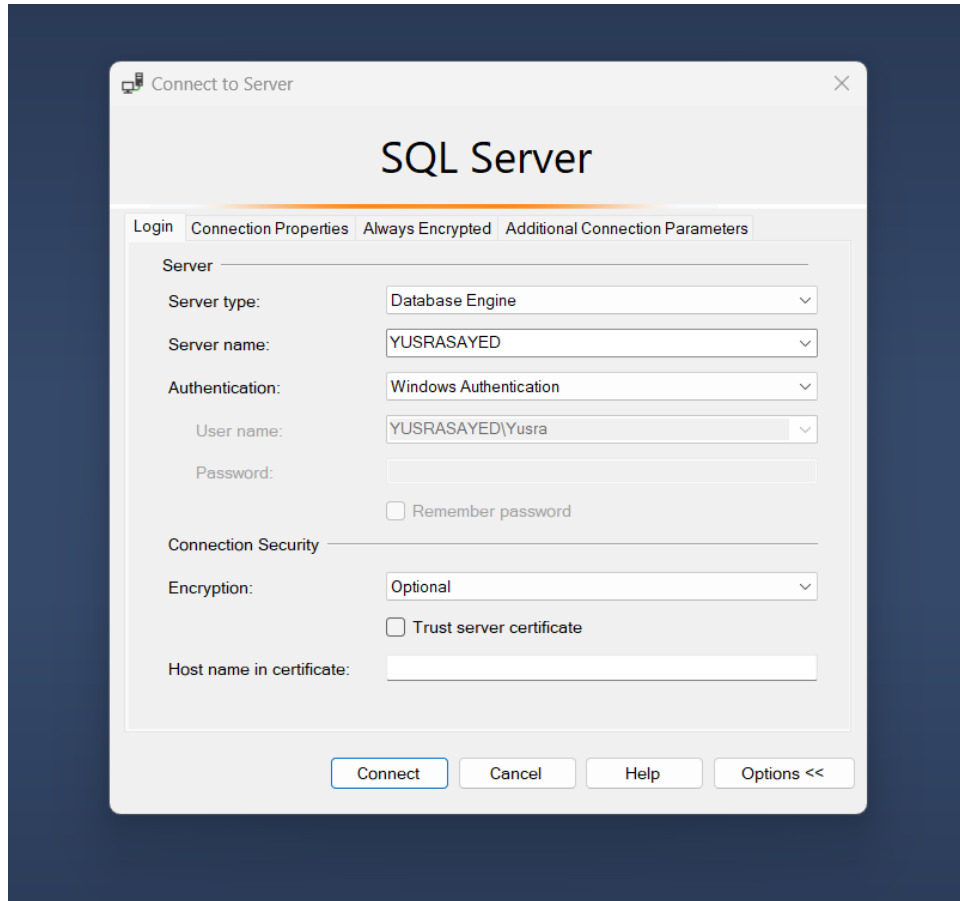

Sentiment: Positive/Negative/Neutral (Pre-processed)

Sentiment Polarity: Sentiment polarity score

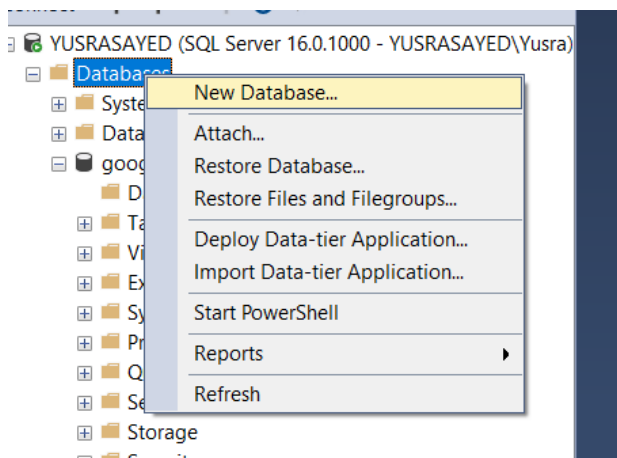

Sentiment Subjectivity: Sentiment subjectivity score

SQL in SSMS

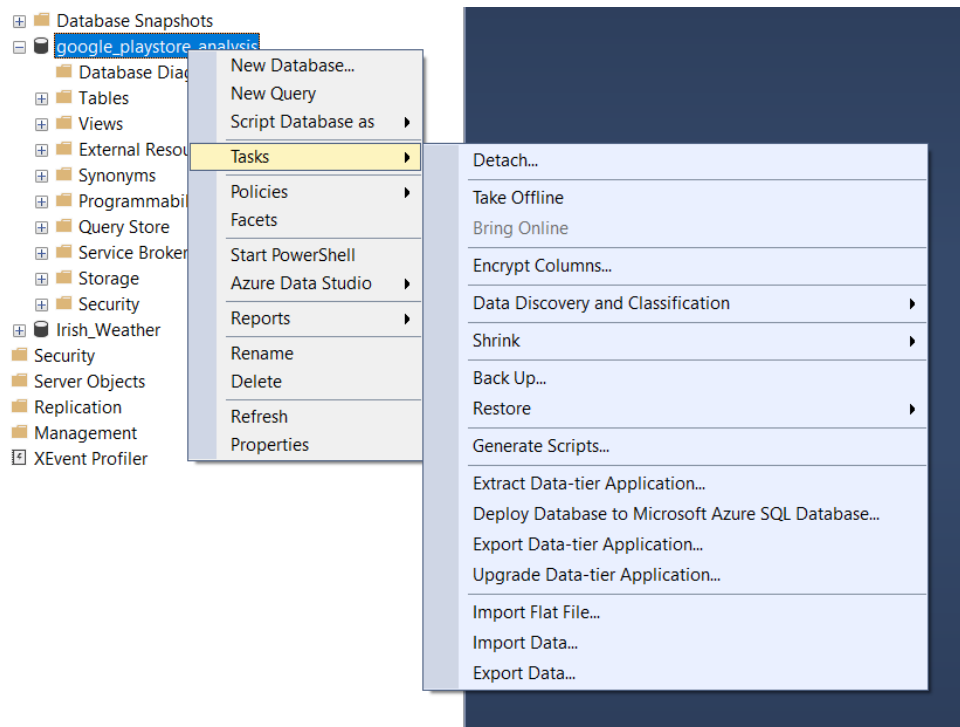

1. Connect to the SQL Server

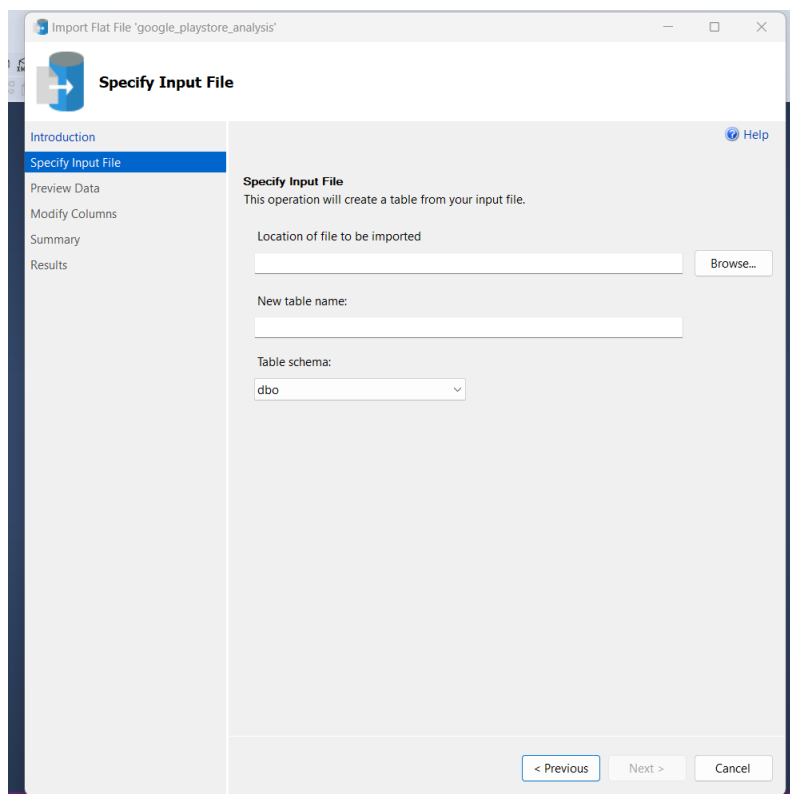

2. Create a new database

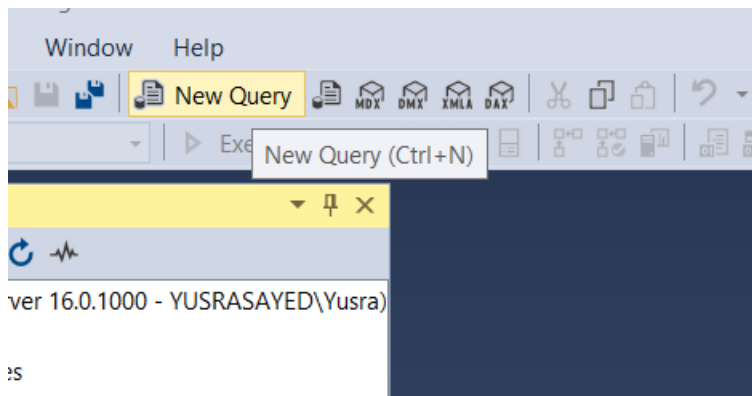

3. Name the database and import the csv files into the database by right clicking on the database > Tasks > Import Flat File

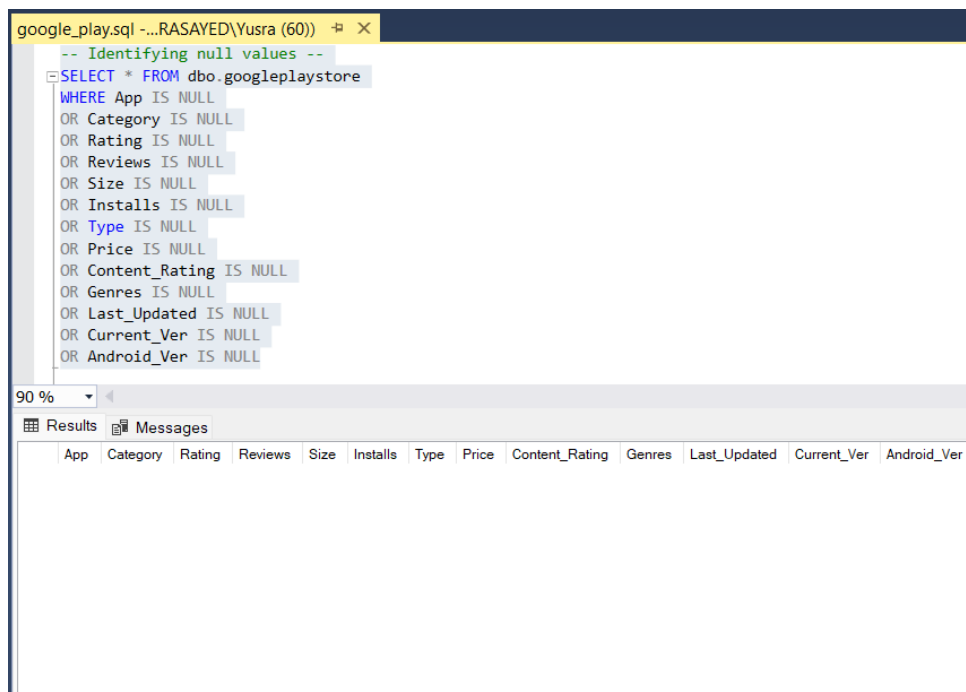

4. Specify the destination of the csv files, click on next and then change the datatypes of each column as necessary and allow null values and click on next. You should see a “Success” message and you are good to go.

5. Click on new query and start writing SQL queries

5.1 Identifying Null Values

5.2 Removing the Null Values

```
DELETE FROM dbo.googleplaystore
WHERE App IS NULL
OR Category IS NULL
OR Rating IS NULL
OR Reviews IS NULL
OR Size IS NULL
OR Installs IS NULL
OR Type IS NULL
OR Price IS NULL
OR Content_Rating IS NULL
OR Genres IS NULL
OR Last_Updated IS NULL
OR Current_Ver IS NULL
OR Android_Ver IS NULL
```
